

Marketplace for Covid-19 Vaccines

Problem

The biggest challenge that governments around the world face today is to provide Covid-19 vaccines for their citizens. The problem arose suddenly and the steps are taken chaotically. The vaccines do not have an orderly supply chain, in some countries vaccines lie unused waiting for approval, while other countries would be ready to use them and save lives.

Solution

Transparent Marketplace connecting Municipalities, Governments, Corporations and Laboratories around the world. This speeds up the ordering of vaccines from weeks to days.
